

Our PreK-5 class uses a Project Based Curriculum. They study 4 habitats in our world while learning social skills, math, science, reading, writing, and art. Here are some highlights from the Ocean Unit.

# Oceans

We made seaweed with paper bags and made fish using celery and paint. We talked about why the plants are so important to the ocean life and to us.

We used different animals that live in the ocean to learn about numbers. Here we used an octopus with eight legs and counted with Cheerios.

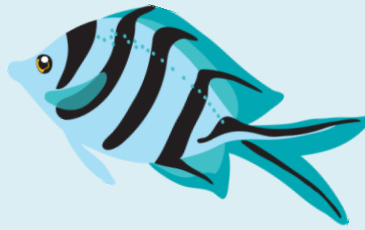

We played ocean themed board games. We practiced taking turns and playing together.

# Oceans

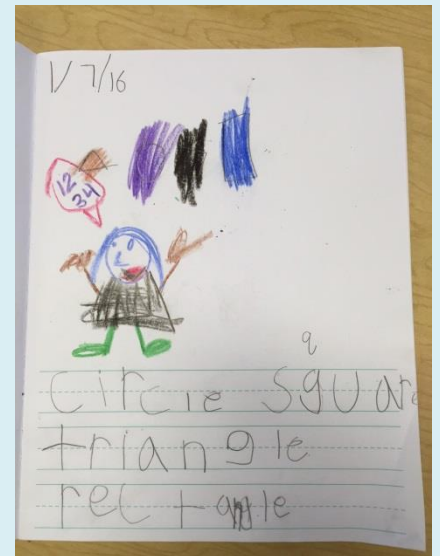

We learned about perimeter and measured out fish.

We were detectives of the sea and explored many different sea shells.

We made ocean waves in jars.

We read interesting books about the ocean. Each morning we wrote in our journals.
